---

## PROJECTS

### Apollo

[GitHub](#)

An app designed for internal business communication

JavaScript | React | CSS | Node | Express | PostgreSQL | AWS

- Created the API and Database of the application using Node, Express, SQL, and Knex.
- The back-end allowed the UI to have functionality by calling to the API, querying through Node relational tables using SQL, rendering data, then finally allowing for C. R. U. D operations to manipulate information.

### VR-Funding

[GitHub](#)

An app designed for investors to invest in start-up ideas

JavaScript | React | CSS | Node | Express | PostgreSQL

- Created the UI and account creation/login functionality for the application using React.
  - The UI allowed users to sign up, log in, verify tokens and sessions, and host start-ups. The UI calls to the API to allow users to post start-up ideas and gain funding.
-
